SUMMARY

Motivated MCA graduate with basic knowledge in Linux administration, AWS cloud, and DevOps concepts. I have hands-on experience with Linux commands, shell scripting, Git, and GitHub, along with system troubleshooting. Currently, I am learning DevOps tools and practices such as Docker and CI/CD. I am eager to improve my skills, learn new technologies, and start my career in Linux system administration and DevOps.

EDUCATION

PG - Karpagam College of Engineering Master Of Computer Application: CGPA – 7.8	2024 - 2026
UG – Kongu Arts and Science College Bachelor of Science (Computer Science): CGPA - 6.5	2021 - 2024

SKILLS AND INTERESTS

Operating Systems : Linux (RHEL), Windows
Cloud Platform : AWS (EC2, S3, IAM, VPC, Cloudwatch, Route 53, RDS, Lambda)
DevOps Tools : Git, Jenkins, Docker, Kubernetes, Terraform, Ansible
Containerization : Docker, Kubernetes
Programming : Python
Version Control : GitHub
Networking : IP Configuration, DNS, Troubleshooting, Load Balancing

PROJECTS

Robust Mobility Management for Connectivity Recovery in Underwater Acoustic Sensor Networks ◦ Developing a mobility management framework to restore connectivity in underwater acoustic sensor networks (UASN) during node failures. ◦ Analyzing network behavior using simulation techniques to ensure effective connectivity restoration.	JAN 2026 – APR 2026
Real-Time Quality Assurance and Fault Detection in Vision Systems for Connected ◦ Developed a real-time framework to ensure the quality and reliability of visual data in autonomous vehicle vision systems. ◦ Implemented fault detection algorithms to identify anomalies such as sensor degradation, blurred frames, and environmental interference. ◦ Tech Stack: Python, OpenCV, TensorFlow, Deep Learning, Computer Vision, Edge Computing	JUN 2025 - AUG 2025
IoT Based Air and Sound Pollution Monitoring System in Medical Centre ◦ Developed a real-time IoT-based system to monitor air quality and noise levels within medical centres for ensuring a safe and healthy environment. ◦ Integrated multiple sensors (gas, dust, and sound) with microcontrollers to collect, process, and transmit environmental data to a centralized dashboard. ◦ Tech stack: Arduino IoT Sensors, Cloud Computing, Data Analytics, Embedded C	FEB 2024 - MAY 2024
